PUBLICATIONS

- H. Kumar, A. Konkar. Simple Transformer with Single Leaky Neuron for Event Vision. **Feb 2025**
Proceedings of the Winter Conference on Applications of Computer Vision (WACV) Workshops, 2025, pp. 928-934
- A. Konkar, X. Qu. A Review of Transformer-Based and Hybrid Deep Learning Approaches for EEG Analysis. **Jun 2025**
International Conference on Human-Computer Interaction (HCI International) 2025.

EDUCATION

- Master of Science in Computer Science** **May 2025**
The George Washington University | GPA: 3.71/4.00 Washington, DC
Thesis: Enhancing EEG-Based Gaze Prediction with Transformers on EEGEyeNet ↗
Relevant Courses: Computational Linear Algebra, Machine Learning, Neural Networks & Deep Learning, Computer Vision
- Bachelor of Engineering in Information Technology** **Oct 2020**
University of Mumbai Mumbai, India

RESEARCH AND WORK EXPERIENCE

- Resarch Assistant** **Oct 2025 – Present**
GW Vision Lab Washington, DC
• Creating a dataset of event camera recordings of various objects responding to sound stimuli, where audio not recorded.
• Investigating methods to reconstruct acoustic signals from event-based visual input. Research Advisor: Dr. Robert Pless.
- Software Engineer (Volunteer)** **Mar 2025 – Present**
National Collegiate Table Tennis Association (NCTTA) Remote
• Developing and maintaining core features for the NCTTA web application using .NET Core MVC.
- Research Assistant** **Nov 2023 – Oct 2025**
GW Institute of Public Policy Washington, DC
• Performed statistical data analysis, modeling to evaluate the impact of career pathway programs. PI: Dr. Robert Olsen.
• Developed robust data cleaning and transformation pipelines for multi-site program evaluation datasets.
• Applied statistical modeling and A/B testing to measure treatment effects, using FIRC regression and empirical Bayes estimators. Built Python automation pipelines that parsed the generated descriptive statistics and automatically produced structured analysis reports.
- Software Engineer** **Aug 2020 – Jun 2022**
Larsen & Toubro Infotech Mumbai, India
• Developed Spring Boot microservices and implemented Selenium-based test automation for an internal Capital Markets platform for our client, Citi Bank, ensuring compliance with corporate QA standards.
• Saved 8 hours of manual testing effort per week by automating complex end-to-end test scenarios using Java & TestNG.
• Optimized SQL queries and improved API efficiency, contributing to a 25% reduction in data retrieval time. Collaborated with cross-functional teams to translate functional specifications into modular, maintainable software components.

TEACHING & TUTORING EXPERIENCE

- Teaching Assistant** – CSCI 1011. Introduction to Software Development, GW **May 2025 – Aug 2025**
- Teaching Assistant** – CSCI 1112. Algorithms and Data Structures, GW **May 2025 – Aug 2025**
- Teaching Assistant** – CSCI 2113. Software Engineering, GW **May 2025 – Aug 2025**
- Student Tutor** – GW Athletics **Sep 2023 – May 2025**
- MATH 1221. Calculus with Precalculus II.
 - MATH 1232. Single-Variable Calculus II.
 - MATH 3125. Linear Algebra II.
 - CSCI 1011. Introduction to Programming with Java.
 - CSCI 1112. Algorithms and Data Structures.

SELECTED PROJECTS

From-Scratch Implementation of a Low-Level Image Classification Network – Python [Report] [GitHub](#)

- Developed a complete neural network training pipeline in Python (without using deep learning libraries).
- Implemented manual forward pass, backpropagation, gradient updates, and weight initialization.
- Built custom image preprocessing modules (posterization, enhancement, feature extraction) to improve data quality and model performance.

Right Whale Individual Identification – PyTorch

[GitHub](#)

- Developed a deep learning-based solution to identify individual Right Whales from images. See Kaggle task details [here](#).
- Preprocessed raw whale images by resizing & training a localization network to extract whale heads. Trained a secondary neural network to detect blowhead & bonnet coordinates, applying affine transformations for consistent head alignment.
- Trained a pretrained Vision Transformer model from Hugging Face, conducted inference using the image classification pipeline to distinguish individual whales accurately. Credits: Preprocessing approach was followed from [here](#).

Landmark Recognition – Python, Streamlit

[GitHub](#)

- Developed a landmark recognition web application that predicts landmarks from images, retrieves their full address with latitude/longitude, and visualizes them on an interactive map for exploration.
- Leveraged a pretrained tensorflow-hub model, trained on the Google Landmarks Dataset V2.

Real-Time Person Detection & Tracking – Python

[GitHub](#)

- Developed a real-time person detection and tracking pipeline using YOLOv8x for detection and DeepSORT for tracking.
- Evaluated multiple tracking methods (IOU, SORT, DeepSORT). Tested on an NVIDIA RTX 3070.

Forecasting Hourly Electricity Demand and Assessing Grid Resilience – Python

[Report]

- Fine-tuned machine learning models (LSTM and Prophet) to predict hourly electricity demand from national grid data.
- Evaluated how major disruptions (like storms or accidents) influence grid performance, turning data-driven insights into recommendations for stronger energy systems.

TECHNICAL SKILLS

Programming Languages: C, C++, Embedded C, MATLAB, Python, R, SQL, Java, JavaScript

Frameworks & Libraries: PyTorch, Keras, Tensorflow, NumPy, Pandas, OpenCV, Scikit-learn, Matplotlib

Deep Learning Architectures: MLP, CNN, RNN, LSTM, Self-Attention, Transformers, Attention-Based Fusion, VAEs, GANs, LLMs

Computer Vision: Image formation & Optics, SIFT, Optical Flow, SfM, Visual Odometry, SLAM

Domain Skills: Event-Based Vision, Calibration, Spiking Neural Networks, Rotation Matrix, ROS
